Special edition covering Product Certification against AS1546.3:2017

Test site at Jimboomba nearing Completion. We will accept Units for testing from 8th October 2017

Influent reception tank designed with a conical floor Block walls with levelled sites .
8 available within block walls for in ground testing and 10 sites for above ground testing.

Key features:

- Individual power supplies with cut out switches and electricity meters.
- Influent quality checked that it meets the requirements of the standard
- Individual influent feed lines via individual PLC controlled Monopumps and Flowmeters
- 24 hour composite sampling into a refrigerated trailer for temperature control and full security
- All monopumps, flow meters and PLC's are identical allowing rapid changeover if any faults occur eliminating testing interruption for extended periods
- Ability to complete R&D and also Compliance testing at the site under supervised conditions. The site will continue to operate for both R&D and compliance testing as part of our commitment to the waste water treatment industry.
- Three full winter periods available prior to December 2020 for compliance testing.
- Highly experienced staff running the test site greater than 42 years experience in wastewater management and over 20 years in certification.
- No sub-contractors used. All personnel associated with testing are associated with Global Certification Pty Ltd
- Staff accommodated close to the test site Less than 15 minutes away
- Fully secure site with CCTV monitoring
- Once operational regulators have been invited to visit the site for approval purposes
- In the interests of uniformity, other certification Bodies have been invited to use the test site in conjunction with Global Certification Pty Ltd
